Book Descriptions:

Browning bow owner s manual

A minimal charge will be assessed for all bows returned to Browning Archery for warranty service. Evidence of abuse, mishandling, or alteration to any Browning Archery product voids any claim to warranty. Total arrow weight must be a minimum of five grains per pound of bow peak draw weight. Over stressing Browning Archery compound bows by using arrows lighter than the five grain minimum will void the warranty and may cause damage to the bow and possible injury to the shooter. Browning Archery makes no other claims of warranty either expressed or implied. In the interest of product improvement and consumer safety, Browning Archery reserves the right to make changes in product design, color and specifications without notice. In the event a product needs to be returned to Browning Archery please contact Browning Archery Customer Service for a Return Authorization Number and shipping instructions. Please send accompanying documentation, such as dated sales receipt showing the purchase date of the product. If no documentation is received, Browning Archery will utilize the serial number to determine warranty status. BOW DIAGRAMS

Understanding your bow and its component parts will add to your archery enjoyment. Although bows differ in performance and features, these photos represent the components available in various combinations on most models. Being familiar with this information will help you with the instructions throughout this manual. Also, you can refer to these photos when ordering parts or making technical inquiries.

Mines waiting two weeks to smoke a bear in New Mexico!!! More Super high amount of views. 0 sold, 1 available. You are the light of the world. Setting the bow at your optimum draw length and weight will increase your accuracy in both target and hunting scenarios. Both can be changed quickly to suit your personal needs and neither adjustment requires a bow press. Items you will need Set of Allen wrenches Draw Weight Use the Allen wrench that works with your particular bow to turn the limb bolts clockwise until they are

tight. <http://pumbacamp.co.za/userfiles/danby-designer-ice-n-easy-manual.xml>

This puts the bow at its maximum weight setting. Turn the limb bolts counterclockwise until you reach the desired weight. Adjust both limb bolts the same number of turns and don't loosen the bolts more than four turns. Draw Length Check the paperwork that came with your bow. This tells you the range of draw lengths that you can set the bow. Use the correct Allen wrench to remove the inner cam screw. Reinsert the screw in the hole corresponding to your chosen draw length. Warnings Read and follow all safety warnings in the owner's manual before making adjustments. Search for a local APA authorized dealer. For more information see our warranty page or refer to the owner's manual. Here you can change your privacy preferences. Please note that blocking some types of cookies may impact your experience on our website and the services we offer. Register Here Got some info!!! PSE offered to mail a copy of the owner's manual to me free of charge. I just received it and gave it a look over. Very cool I'm glad to have it! My father gave it to me in the mid 80s. It still shoots. What are you trying to find out? Nothing short of an M1 bolt in the face will ruin your day like a compound bow coming apart on you. I reglued and through bolted mine and still use it. Since it's a new week now, I'm going to give Browning customer service a call, too. See if they have anything to throw my way. Thanks !!! I called them both Browning referring me to the apparently they handed over everything. PSE customer service checked and reported that they indeed have literature ala owner's manual. They took my name and address and out of courtesy will copy the manual and mail it to me. Pretty cool. Check for worn or missing components and have them replaced as required. Inspect your arrows to insure that they are straight, undamaged, not cracked and that each nock is in good condition.

When purchasing arrows for your bow, consult the selection chart from the arrow manufacturer and select the correct arrow for your application. Always use an arrow that meets the weight requirement marked on the specification label on the lower limb of your bow. Failure to do so could cause personal injury and damage to your bow. BOW MAINTENANCE Your Browning Archery bow will give you many years of service if maintained and cared for properly. Keep synthetic cables and

string waxed. Apply bow string wax to your synthetic cables and string before each shooting session. Strings and cables must be replaced periodically. A worn cable or string can suddenly break causing serious injury to the archer and damage to the bow. It is recommended that the string and cables be replaced every 5,000 shots or 12 months, whichever comes first. Always store your bow in a cool dry place. High temperatures, such as those that can occur in a trunk or interior of a vehicle, can cause serious damage to your bow. After use in high humidity or damp conditions, wipe metal components of bow with a light oil. 2 3 COMPOUND BOW USER S GUIDE Thank you from the entire Browning Archery family for purchasing a Browning Archery bow. Your Browning Archery bow was manufactured from the finest materials available and handcrafted with pride in the USA. With proper care and use you will enjoy this product for years to come. We at Browning Archery wish you much success in the archery field you have chosen to pursue. Please read this entire booklet before shooting or adjusting your bow. Remember, most adjustments to a compound bow should be made by your authorized Browning Archery dealer on a bowpress. Whenever shooting a bow, be certain of your target as well as what else lies downrange. C O N T A C T U S Fill out the warranty card in this booklet completely, remove it, and mail to BROWNING ARCHERY WARRANTY REGISTRATION P.O.

CAM SYSTEMS - NITROUS & NITROUS-X CAM

•Nitrous and Nitrous-X Cams

Your Nitrous and Nitrous-X Cam System uses one rotating module and one of 3 base cam sizes. Refer to the spec charts at your dealer or www.martinarchery.com to see what base you need for your draw.

•Parts of the Nitrous and Nitrous-X Cams

•Changing The Nitrous Draw Length

Your Nitrous Cam may be an X Shoot-Through system or a standard system, but the draw is adjusted basically the same. The threaded module has numbers and dashes on it that indicate what setting you are on while you are adjusting it. The dashes signal 1/2" draw increments. When you are adjusting the draw, make sure that both modules are in the same setting. To rotate the modules, you will need to remove the mod screw closest to the Cable Boss and loosen the module screw that is closest to the Bearing Boss. If you are using a Mini Module for short draws, there is only one screw. Slide the module to the desired position and replace and tighten the screws in the appropriate positions. The modules provide a longer draw as the module number gets higher.

Note: For more options in draw length adjustment see the section called Using Nitrous Mini Modules on the next page.

Box 5507 Tucson, Arizona 4 BOW TERMINOLOGY IDLER WHEEL COMPOUND BOW USER S GUIDE BOW QUIVER STABILIZER LIMB BOLT SIGHT RISER SHELF LIMB CABLE CABLE GUARD SLIDE ARROW REST GRIP LIMB POCKET STRING PEEP SIGHT CABLE GUARD NOCK POINT BOW SLING CAM 4 ARROWS 5 SAFETY As with any weapon, safe operation of your Browning Archery bow must always be the highest priority. Dryfire is to draw and release the bowstring without an arrow in the bow. Dryfiring will likely cause damage to the bow and serious injury to the archer. b. Always be sure of your intended target as well as what lies behind the target area. An arrow can

travel a considerable distance, so it is important to have a safe and sound backstop. c. If you draw a bow and need to let it down, do so in a slow and careful manner. Keep your support arm straight and prepare for a rapid and violent letdown as the bow returns to peak weight. Avoid hitting your hand on protruding accessories such as the cable guard or quiver. Keep your head and face back and out of the string path during letdown. Never draw a bow with a peak weight above your comfort level. Always use a bow sling when drawing and shooting a bow. d. Never modify any part of the bow or its components by drilling extra holes or removing material. Release Aid Shooters Install the nocking point the width of the arrow above a point where a horizontal line from the rest intersects the string. When the arrow is in position on the rest, the arrow nock should fit snug against the bottom of the nocking point. That is, if the shot group is to the left of the target, move the sight pins to the left. If the shot group is low, move the sight pins down. Cable Guard Adjustment The purpose of a cable guard is to hold the cables out of the path of the arrow. Many Browning bows have a nonadjustable cable guard. When adjusting the angle of an adjustable cable guard, adjust it so the cables just clear the arrow vanes.

DAVIDPIPE.COM/images/3m-6800-full-face-respirator-manual.pdf

Always adjust the cable guard with the rod in the up position approximately 1 o'clock for a righthanded bow. Sight The sight should be installed according to the instructions received with the product. Stabilizer Likewise, the stabilizer should be mounted according to the manufacturers recommendation. Slight changes in draw weight can be obtained by turning the limb bolt in or out.

Before making any changes in weight, turn the limb bolt clockwise until it no longer moves. This adjusts the limb to its maximum weight setting. Never use extreme torque when turning the bolt or damage to the limb may occur. The limb bolt then may be turned counterclockwise to obtain the desired weight, but NEVER more than 6 turns or revolutions out from the bottomed position. Adjust each limb exactly the same. If the bow has a limb bolt lock, you will need to loosen the lock screw before making any adjustments. Each one comes from the factory setup and ready to use but there may be occasions where you need to adjust the drawlength setting of your bow. If you are not sure of the adjustment you are making, stop and see your Browning Archery Dealer for assistance. Limb Bolt Lock Your Authorized Browning Archery Dealer is supplied with technical information on Browning Archery bows and cams. Please see your Dealer for assistance when making these adjustments. CAM ADJUSTMENTS Cam Adjustments All Browning Archery Cams use the patented Inner Cam System. When adjusting draw length on a two cam bow, make sure the top and bottom cams are always set the same. WARNING Tighten the inner cam setscrew before shooting your bow! continued next page 7 8 CAM ADJUSTMENTS continued Browning Archerys Micro Max and Hyper Max cams have an additional draw length adjustment. Completely remove the screws from the inner cam as well as the cam hub. The inner cam will now line up with a different set of holes on the cam.

DBGROUP-PORTUGAL.COM/images/3m-724-workstation-monitor-manual.pdf

Inner Cam Inner Hub Main Cam Letoff module At the bottom or end of the inner cam on the Cyber SX and Cyber 5 cam is a small rectangular block with a socket screw in the middle. This is the letoff module. If this figure or indicator is toward the outside of the cam, and aligned with the string groove, the bow is set at the lowest letoff. By loosening the screw and turning the block 180 degrees, the letoff can be changed. B R O W N I N G A R C H E R Y BROWNING TRADEMARKS LICENSED FROM BROWNING Browning Archery assumes no responsibility for spelling, grammatical or technical errors in this booklet. Browning Archery reserves the right to change, alter or modify any specifications or details of the product line without notice.
